

# Henry Gressmann

Software Engineer · Rust, WebAssembly, Backend Systems

✉ [hi@henrygressmann.de](mailto:hi@henrygressmann.de) 📍 Stuttgart, Germany

## Summary

Software engineer focused on Rust, WebAssembly, and backend infrastructure. I work on reliable, high-throughput systems, developer tools, and self-hosted platforms, from architecture to production operations.

Available from October 2026.

## Experience

### AnyDesk Software GmbH

Backend Engineer

Stuttgart  
Feb 2025 - Present

- Built high-throughput Rust services handling tens of thousands of requests per second.
- Worked on distributed backend systems using REST, gRPC, PostgreSQL, and Redis.
- Built internal Rust libraries and shared abstractions used across backend services.
- Improved observability, CI/CD, performance, and production reliability at large scale.

### Self-employed

Freelance Software Engineer

Berlin  
2021 - 2024

- Delivered web, mobile, and backend software for clients across different industries.
- Worked directly with clients to define requirements, scope projects, and ship reliable solutions.
- Built applications across TypeScript, React, React Native / Expo, and backend stacks.
- Owned projects end-to-end, from planning to delivery.

### canX GmbH

Co-Founder

2017 - 2020

- Co-founded a multimedia streaming and social platform, contributing across product and engineering.
- Led a 3-person development team, coordinating architecture, implementation, and delivery.
- Built React Native and Next.js applications, Go backend services, and media-related infrastructure.
- Worked on a custom video player and CDN-backed media delivery system.

## Projects

### TinyWasm

2023 - Present

Open-source WebAssembly runtime written in Rust, with 500+ GitHub stars. Designed for safe execution, portability, and minimal dependencies, with an internal bytecode format for efficient interpretation.

<https://github.com/explodingcamera/tinywasm>

### liwan.dev

2024 - Present

Open-source, privacy-focused web analytics platform written in Rust. Designed for self-hosted deployment with a single binary, low operational overhead, embedded storage, and privacy-preserving analytics.

<https://liwan.dev>

## Education

### CODE University of Applied Sciences

Bachelor of Science • Grade: 1.4

Software Engineering

2019 - 2024

Thesis: Evaluating WebAssembly Runtimes for Use in Edge Computing Environments

## Skills

### Systems & Backend

Rust, WebAssembly, Go, SQL, gRPC, OpenAPI

### Infrastructure & Cloud

Linux, Docker, Containers, Edge Computing, On-Premises

### Web Technologies

TypeScript, React, CSS, Web Security

### Mobile / Native

React Native, Tauri, PWAs

## Languages

German native

English C2
